

## Outsourcing

### **Outsourcing function**

We take care of the functions provided by the IT department, for example:

- Operation
- Administration Databases
- Help Desk

### **Outsourcing solutions**

Information is the raw material of the financial industry:

- Understanding of their clients,
- Have a catalog of products and customized services,
- A simulation,
- Exchange real-time a set of information with partners obtain the approval of a third party accreditation,
- Availability of relevant indicators assists in decision making.

Almost everything is based on the information system, and remains consistent regardless of the job.

Therefore, an integration project covers many aspects. The selection of the team is very often crucial for the success of the project. The key word in its composition is multidisciplinary; skills to bring are varied and must be used:

- Business expertise
- Control firmware
- Organizational Transformation
- Risk Management

- Project management
- Pedagogy
- Field support
- Integration of information systems
- Technologies
- Process recipe

## **Managed Application**

Our department Consulting based on proven its strength in the problems of strategy, particularly in the financial sector (particularly in regional banks) experience, and the institutions of the social economy sector (Institutions Pension and Provident, Mutual). It also has operations in developing synergy between public sector entities (Chambers of Commerce and Industry ...).

### *Green Network Technology refines its expertise in project management:*

In all projects that Green Network Technology is requested, we favor the application of a few simple rules and efficient pilotage:

- The "hierarchy project" prevails in the organization of business
- The project management team brings together all the interests involved
- Reflection and description of project organization is a prerequisite
- MOA project, consisting of the sponsor and the project manager must be clearly identified
- EOM, functional or technical, is composed of a multidisciplinary team adapted to carry out the work
- The control exerted on the three axes: loads, time and matter

To meet various business concerns, the Green Network Technology Group has developed a range of services around several axes.

Whatever the service, we initiate a team that definitely puts the client side to guide and assist objectively.

## E-Business

The E-business for the establishment of an intranet or an extranet.

### **Operating system legal**

Many critical information residing in legal systems in place in proprietary architectures previously inaccessible.

We can provide you with an advanced way for you to benefit from these legal systems connect seamlessly to an internal and external system while optimizing performance.

Using a suite of integration as SeeBeyond™, we can transform your use of e-business by enabling you to connect, integrate, and optimize quickly and easily:

- Connect to its partners, suppliers and customers quickly and safely to allow the exchange of business critical information
- Integrate all business data, systems, and other applications in a common platform
- Optimize internal and external core business processes
- With SeeBeyond™ (continued business integration) we can expand your capabilities more quickly, without the help of a massive investment.

There are also other ways to extend the life of older systems. For example, you may want to consider using a chat tool to convert an application to COBOL / CICS COBOL / Microsoft.Net application on Intel server. The interest to do so depends on each case study.

Our system integration Package covers project management, technical consulting, design and implementation of the solution and infrastructure, methodology and key partnership.

## Training

While training is not our core services, there is always a part of our consulting and infrastructure support.

That is why we seek to develop a unique relationship with our customers and avoid the pitfalls that often tarnish the relationship between clients and consultants. The team is already in place with our customers is very protective in their field while the consultant tries to create autonomy through the transfer of knowledge.

It is essential for us to create a partnership of trust to make us aware of your goals in working with us.

- Save time and money
- Expert Access
- Knowledge Transfer

## Teleservices
